```
Cyber security is the practice of protecting digital devices, networks, and sensitive data from cyber threats such as hacking, malware, and phishing attacks. "It involves a range of strategies, technologies, and best practices designed to safeguard computers, networks, and data from cyber attacks. "It involves a range of strategies, technologies, and best practices designed to safeguard computers, networks, and data from cyber attacks. "It involves a range of strategies, technologies, and best practices designed to safeguard computers, networks, and data from cyber attacks."
specialized tools to detect and remove harmful software while also learning to identify and avoid online scams. Practicing good cybersecurity (INFOSEC), Information Assurance (IA), or System Security. What is Cyber Security?
(Definition & Importance) Cybersecurity is all about protecting your computer, phone, or any digital device from hackers and online threats. It keeps your personal information, bank details, files, and online activity safe from being stolen, damaged, or misused. By acquiring knowledge of cyber attacks and cyber security we can secure and defend
ourselves from various cyber attacks like phishing and DDoS attacks. Common Cyber Attacks You Should KnowAttack TypeWhat It MeansPhishing details, or session tokens through fake emails, messages, or websites. It uses social engineering to
impersonate trusted sources and often includes malicious links or attachments to steal information. DDoS (Distributed Denial of Service) Hackers flood a website or server with too much traffic, so it slows down or crashes. It's like a traffic jam that blocks real users from getting in. Every day, there are cyberattacks happening around the world. Without
basic protection, anyone—individuals or companies—can become a victim. That's why knowing about cybersecurity is just as important for financial aspect of cybersecurity is just as important as locking your house. One crucial aspect of cybersecurity is Encryption, which ensures that sensitive information remains private and readable only to authorized users. This is especially important for financial
transactions, personal communications, and corporate databases to prevent data theft and unauthorized accessIn short, cybersecurity keeps your online world safe and secure. It ensures that sensitive information remains confidential, intact, and accessible only to authorized users. Whether it's securing personal information, financial transactions, or
corporate databases. Start your Cybersecurity Journey with: Cyber Security Tutorial Types of Cybersecurity There are seven types of cybersecurity focuses on securing computer networks from unauthorized access, data breaches, and other network-based threats. This involves implementing
technologies such as Firewalls, Intrusion detection systems (IDS), Virtual private networks (VPNs), and Network segmentation as well as deploying antivirus software Using public Wi-Fi in locations like cafes and malls poses significant security risks. Malicious actors on the same network can potentially intercept your online activity, including sensitive
information. If you use payment gateways on these unsecured networks, your financial data could be compromised because these open networks don't have proper security layers, which means anyone—even hackers—can watch what you're doing online. So, use a secure private network or VPN to protect your internal network from outside threats 2.
Application Security (Ensuring Secure Software and Apps) Concerned with securing software applications and preventing vulnerabilities that could be exploited by attackers. It involves secure coding practices, regular software updates and preventing vulnerabilities that could be exploited by attackers. It involves secure coding practices, regular software updates and preventing vulnerabilities that could be exploited by attackers. It involves secure coding practices, regular software updates and preventing vulnerabilities that could be exploited by attackers.
under the rules and regulations of the Google Play Store. There are 3.553 million applications in Google Play, Apple App Store has 483 million available for users to download. With so many choices, it's easy to assume all apps are safe—but that's not true. Some apps pretend to be secure, but once installed, they
collect personal data and secretly share it with third-party companies. The app must be installed from a trustworthy platform, not from some 3rd party website in the form of an APK (Android Application Package). Focuses on protecting sensitive information from unauthorized access, disclosure, alteration, or destruction. It includes Encryption, Access
controls, Data classification, and Data loss prevention (DLP) measures. Incident response refers to the process of detecting, analyzing, and responding to security incidents promptly. Promoting security awareness among users is essential for maintaining information security incidents promptly. Promoting security risks, best practices
for handling sensitive information, and how to identify and respond to potential threats like phishing attacks or social engineering attempts. Encryption is the process of converting information into an unreadable format (ciphertext) to protect it from unauthorized access. 4. Cloud Security (Defending Cloud Storage and Applications) It involves securing
data, applications, and infrastructure hosted on cloud platforms, and ensuring appropriate access controls, data protection, and compliance. It uses various cloud service providers such as AWS, Azure, Google Cloud, etc., to ensure security against multiple threats. Cloud-based data storage has become a popular option over the last decade. It enhances
privacy if configured and managed correctly and saves data on the cloud, making it accessible from any device with proper authentication. These platforms offer free tiers for limited usage, and users must pay for additional storage or services.
tools.5. Endpoint Security (Protecting Devices like Laptops & Phones)Refers to securing individual devices such as computers, laptops, smartphones, and IoT devices. It includes antivirus software updates. Antivirus and Anti-malware software that scans and detects malicious
software, such as Viruses, Worms, Trojans, and Ransomware. These tools identify and eliminate or quarantine malicious files, protecting the endpoint security. They monitor and control incoming and outgoing network traffic, filtering out potentially malicious data
packets. Keeping software and operating systems up to date with the latest security Protocols) Refers to the processes and policies organizations implement to protect sensitive data from internal threats and human errors. It involves access controls
risk management, employee training, and monitoring activities to prevent data leaks and security breaches. Access Controls ensure that only authorized personnel can access critical systems and sensitive information. This includes role-based access, multi-factor authentication (MFA), and least privilege principles. Risk Management involves identifying,
analyzing, and mitigating security risks within an organization. It includes regular security assessments, vulnerability testing, and compliance audits. Employee Training is crucial for preventing insider threats and social engineering attacks. Organizations conduct cybersecurity awareness programs to educate employees on phishing scams, password
security, and data handling best practices. Monitoring & Incident Response includes tracking user activity, detecting suspicious behavior, and responding to security Information and Event Management (SIEM) tools help organizations analyze and mitigate threats effectively. 7. Internet of Things (IoT) SecurityRefers to
protecting internet-connected devices such as smart home gadgets, industrial sensors, medical equipment, and wearable technology from cyber threats. IoT security ensures that these devices do not become entry points for hackers to exploit networks and steal sensitive data. Device Authentication & Encryption ensures that only authorized devices
can connect to networks. Encryption protects data transmitted between IoT devices and servers from interception. Firmware & Software Updates are crucial to patch security vulnerabilities. Regular updates help prevent exploitation by cybercriminals who target outdated IoT firmware. Network Segmentation isolates IoT devices from critical systems,
reducing the risk of widespread attacks if one device is compromised. This approach limits unauthorized access and lateral movement within a network. IoT Security Standards & Compliance include implementing industry security frameworks like Zero Trust Architecture (ZTA) and following best practices such as strong password policies, secure APIs,
and endpoint protection to enhance IoT device security. Why is Cybersecurity is Important? Cyber Security is important because the government, corporations, and medical organizations, collect military, financial, process, and store unprecedented amounts of data on a computer and other properties like personal information, and this private
information exposure could have negative consequences. In 1972, when the internet was just starting (called ARPANET at the time), a test virus named Creeper was created—and then another program called Reaper was made to remove it. This early experiment showed why digital security was needed and helped start what we now call
cybersecurity.Rising Cyber Threats: How Hackers Exploit Weak SecurityCybercriminals are constantly finding new ways to exploit vulnerabilities in systems, networks, and personal devices. Weak passwords, outdated software, and unsecured networks create easy entry points for hackers. They use sophisticated methods like phishing emails,
ransomware, and social engineering to steal sensitive data, disrupt operations, and demand ransoms. With the rise of AI-driven cyber threats, even automated bots can breach security systems, making cybersecurity more critical than ever. For Example - If we shop from any online shopping website and share information like email ID, address, and
credit card details as well as save on that website to enable a faster and hassle-free shopping experience, then the required information is stored on a server one day we receive an email which state that the eligibility for a special discount voucher from XXXXX (hacker use famous website Name like Flipkart, Amazon, etc.) website to receive the coupon
code, and we will be asked to fill the details then we will use saved card account credentials. Then our data will be shared because we think it was just an account for the verification step, and then they can wipe a substantial amount of money from our account. Consequences of Cyber Attacks for Businesses & IndividualsA successful cyber attack can
have devastating effects, both financially and reputationally. For businesses are especially vulnerable, as they often lack robust security measures. Individuals, on the other hand, face risks like identity theft, financial fraud, and personal data
leaks. Cyber attacks can wipe out bank accounts, expose private information, and even lock users out of their own devices unless a ransom is paid. The consequences can be long-lasting, leading to emotional distress and financial instability. Major Cybersecurity Threats & AttacksHackers use advanced techniques to find weaknesses in systems, steal or
change data, and break into networks without permission. Below are the most common cybersecurity threats that target businesses, cloud storage, and personal devices: Read complete article, here: Types of Cyber Attacks (Viruses, Trojans, Rootkits, and Spyware) Malware is a type of harmful software created to enter, attack, and
compromise systems. It includes trojans (which look like real software but are harmful), rootkits (which secretly steals data). Hackers use payload obfuscation (hides the malicious code making it harder for security software to identify), polymorphic techniques (changing malware code to
avoid detection), and zero-day exploits (attacking unknown security flaws) to bypass intrusion detection systems (IDS) and endpoint protection platforms (EPP).2. Phishing & Spear Phishing uses tricks and manipulation to steal login details, session tokens, and financial information. Spear phishing is a more targeted version that uses
open-source intelligence (OSINT) to create personalized fake messages. Hackers use domain spoofing (making fake websites look real), homograph attacks (using similar-looking characters in URLs), and malicious macros (harmful scripts hidden in email attachments) to bypass security and trick users into revealing sensitive data. 3. Ransomware
Attacks (Cryptographic File Encryption)Ransomware locks important system files by encryption (AES-RSA). It then demands a ransom, usually in cryptocurrency, to unlock the data. More advanced types, like double extortion ransomware, first steal sensitive data before
encrypting it. Hackers then threaten to leak the stolen data on dark web sites if the ransom isn't paid.4. Distributed Denial-of-Service (DDoS) AttacksDDoS attacks overload a network by flooding it with massive amounts of traffic at different levels—volumetric, protocol, or application-layer—causing servers to crash and making services
unavailable. Hackers use botnets (networks of infected devices), amplification techniques (like DNS reflection and NTP amplification) to increase attack size, and HTTP flood requests to overwhelm websites. These methods help attackers bypass rate-limiting defenses and take down their targets. 5. SQL Injection (SQLi) & NoSQL Injection SQL injection and NTP amplification techniques (like DNS reflection and NTP amplification) to increase attack size, and HTTP flood requests to overwhelm websites.
attacks take advantage of weak web application queries by inserting malicious SQL code to modify database records, steal login credentials, or run admin-level commands. NoSQL injection targets document-based databases like MongoDB and Firebase by altering query parameters, allowing attackers to bypass authentication and gain unauthorized
access to sensitive data.6. Zero-Day Exploits & Advanced Persistent Threats (APT)Zero-day exploits take advantage of unknown software vulnerabilities before developers release security patches, making them highly dangerous. Advanced Persistent Threats (APTs) use multi-stage attack techniques to stay hidden in a system for a long time. These
include lateral movement (such as pass-the-hash attacks to spread across networks), privilege escalation (gaining higher access rights), and persistence mechanisms (like rootkits and fileless malware) to maintain control over compromised networks. The maintain control over compromised networks and fileless malware) to maintain control over compromised networks.
data exchanged between two parties by exploiting weak encryption or unsecured communication channels. Hackers use techniques like SSL stripping (removing HTTPS encryption), rogue access points (fake Wi-Fi networks), and ARP poisoning (manipulating network traffic) to steal login credentials, hijack user sessions, or inject malicious code into
data transmissionsInsider threats occur when compromised or malicious employees with high-level access steal sensitive data, modify access permissions, or install backdoors to bypass security. Since insiders already have authorized access, they can easily evade traditional perimeter security measures. To detect and prevent insider threats,
organizations use User and Entity Behavior Analytics (UEBA) to track suspicious activities, Privilege Access Management (PAM) to restrict sensitive access, and zero-trust architectures to ensure continuous verification. Cybersecurity tools help protect systems, networks, and data from cyber threats by detecting, preventing, and responding to attacks
These tools play a crucial role in securing infrastructure, identifying vulnerabilities, and mitigating risks. Cybersecurity has evolved dramatically. Before 2015, basic antivirus, firewalls, and internal IT teams were enough against simple viruses and spam. Between 2016 and 2023, cyberattacks became more serious, with
new threats like ransomware, widespread phishing, DDoS attacks, and huge data breaches. Now in 2025, threats like AI-powered attacks, zero-day exploits, deepfake scams, supply chain attacks, and had Machine Learning: More
cybersecurity tools are using artificial intelligence (AI) and machine learning to detect and respond to threats faster than humans can. AI in cybersecurity helps recognize patterns, block suspicious behavior, and even predict future threats—making it one of the most powerful tools to protect sensitive information. Increase in Ransomware Attacks:
Ransomware, where hackers lock you out of your data until you pay a ransom, is becoming more common. Companies and individuals alike need to back up their data to the cloud, ensuring this data is secure is a top
priority. This includes using strong authentication methods and regularly updating security protocols to protect against breaches. Internet of Things (IoT) Vulnerabilities: With more devices connected to the internet, like smart home gadgets and wearable tech, there's an increased risk of cyberattacks. Ensuring these devices have updated security
features is crucial.5. Zero Trust Security: This approach assumes that threats could come from inside or outside the network, so it constantly verifies and monitors all access requests. It's becoming a standard practice to ensure a higher level of security. 6. Cybersecurity Skills Gap: There is a growing need for skilled cybersecurity professionals. As
cyber threats become more sophisticated, the demand for experts who can protect against these threats is higher than ever. Regulatory Compliance: New regulations are being introduced worldwide to protect personal data. Companies must stay informed about these laws to ensure they comply and avoid hefty fines. Cybersecurity Best
PracticesThere are several steps you can take to protect yourself from cyber threats, including: Use unique and complex passwords for all of your accounts, and consider using a password manager to store and manage your passwords for all of your accounts, and consider using a password manager to store and manage your passwords for all of your accounts, and consider using a password manager to store and man
software up to date with the latest security patches and updates. Enable two-factor authentication on all of your accounts to add an extra layer of security. Be aware of suspicious emails: Be cautious of unsolicited emails, particularly those that ask for personal or financial information or contain suspicious links or
attachments. Educate yourself: Stay informed about the latest cybersecurity threats and best practices by reading cybersecurity Constantly Evolving Threat Landscape: Cyber threats are constantly evolving, and attackers are becoming increasingly sophisticated. This
makes it challenging for cybersecurity professionals to keep up with the latest threats and implement effective measures to protect against them. Lack of Skilled Professionals: There is a shortage of skilled cybersecurity professionals to keep up with the latest threats and implement effective measures to protect against them. Lack of Skilled Professionals to keep up with the latest threats and implement effective measures to protect against them. Lack of Skilled Professionals to keep up with the latest threats and implement effective measures to protect against them.
programs.Limited Budgets: Cybersecurity can be expensive, and many organizations have limited budgets to allocate toward cybersecurity initiatives. This can result in a lack of resources and infrastructure to effectively protect against cyber threats. Insider Threats: Insider threats can be just as damaging as external threats. Employees or contractors
who have access to sensitive information can intentionally or unintentionally compromise data security. Complexity of Technology: With the rise of cloud computing, IoT, and other technologies, the complexity of Technology: With the rise of cloud computing, IoT, and other technologies, the complexity of Technology: With the rise of cloud computing, IoT, and other technologies, the complexity of IT infrastructure has increased significantly. This complexity makes it challenging to identify and address vulnerabilities and implement
effective cybersecurity measures. Strategies for Addressing Cybersecurity Challenges Comprehensive Risk Assessment: A comprehensive risk assessment can help organizations identify potential vulnerabilities and prioritize cybersecurity initiatives based on their impact and likelihood. Cybersecurity Training and Awareness: Cybersecurity training and
awareness programs can help employees understand the risks and best practices for protecting against cyber threats. Collaboration and Information Sharing: Collaboration and Information Sharing between organizations, industries, and government agencies can help improve cybersecurity strategies and response to cyber threats. Cybersecurity
Automation: Cybersecurity automation can help organizations identify and respond to threats in real time, reducing the risk of data breaches and other cyber attacks. Continuous monitoring of IT infrastructure and data can help identify potential threats and vulnerabilities, allowing for proactive measures to be taken to prevent
attacks. Conclusion Cybersecurity is no longer a choice—it's a must for everyone, from web browsers to corporations handling millions of sensitive information. With increasing threats such as phishing, ransomware, data breaches, and AI-driven cyber attacks, surfing online without protection can be risky. Global cybercrime losses in 2023 totaled more
than $8 trillion. That figure is projected to reach approximately $9.5 trillion in 2024, and could approach $10.5 trillion in 2025. These statistics easily demonstrate the need to lock down your devices, guard your personal and financial information, and employ sound cybersecurity software and methodologies. Whether it's preventing phishing scams,
securing cloud storage, or blocking malware, cybersecurity plays a key role in ensuring a safe digital environment. By staying informed, using robust security principles via hands-on activities Unique among
computer security texts, this book, in its third edition, builds on the author's long tradition of teaching complex subjects through a hands-on activities to help explain the principle. Readers can touch, play with, and experiment with the principle, instead of just reading about it.
The hands-on activities are based on the author's widely adopted SEED Labs, which have been used by over 1000 institutes worldwide. The author has also published online courses on Udemy based on this book. Topics covered in the book. Software vulnerabilities, attacks, and countermeasures- Attacks on web applications, countermeasures- Attacks
on hardware: Meltdown and Spectre attacks- Cryptography and attacks on algorithms and protocols- Public Key Infrastructure (PKI)- Common hacking and defense techniques How can financial brands set themselves apart through visual storytelling? the Olympic Village. Transportation during the 2024 Summer Olympics and Paralympics constituted a major challenge for the event. Over €500 million was invested in improvements to transportation infrastructure for the games. A mobile app was developed to facilitate travel by offering a route calculator, and 5,000
agents were deployed at stations and bus stops to assist travellers. A goal of Paris 2024 was to halve the average carbon footprint of the London 2012 and Rio 2016 games. The organisers estimated that more than a third of the greenhouse gas emissions would be from the transport of athletes and spectators. All venues were made accessible by public
transport and bicycle, with 415 kilometres (258 mi) of cycle paths created to link the venues and 27,000 bicycle racks installed. Public transport was extended and services increased. The goal was met, with an estimated 54.6% reduction, representing 1.59 million tonnes of CO2 equivalent. (Full article...) Recently featured: Rhine campaign of 1796

Awards ceremony, presented by the Academy of Motion Picture Arts and Sciences (AMPAS), took place on March 12, 2023, at the Dolby Theatre in Hollywood, Los Angeles. During the gala, the AMPAS presented Academy Awards (commonly referred to as Oscars) in 23 categories honoring films released in 2022. The ceremony, televised in the United
Hotel in Century City, California, on November 19, 2022. The Academy Scientific and Technical Awards were presented by host Simu Liu on February 24, 2023, in a ceremony at the Academy Museum of Motion Pictures in Los Angeles.[5] Everything Everywhere All at Once won seven awards, including Best Picture.[6][7] Other winners included All
Quiet on the Western Front with four awards, The Whale with two, and Avatar: The Way of Water, Black Panther: Wakanda Forever, The Boy, the Mole, the Fox and the Horse, The Elephant Whisperers, Guillermo del Toro's Pinocchio, An Irish Goodbye, Navalny, RRR, Top Gun: Maverick, and Women Talking with one. The telecast drew 18.75 million
viewers in the United States.[3] The nominees for the 95th Academy Awards were announced on January 24, 2023, at the Samuel Goldwyn Theater in Beverly Hills, by actors Riz Ahmed and Allison Williams.[8] Everything Everywhere All at Once led all nominees with eleven nominations; All Quiet on the Western Front and The Banshees of Inisherin
tied for second with nine nominations each.[9][10] The winners were announced during the awards ceremony on March 12, 2023. Everything Everywhere All at Once became the first science fiction film to win Best Picture,[11] and became the third film, alongside A Streetcar Named Desire (1951) and Network (1976), to win three acting awards.[12]
Best Director winners Daniel Kwan and Daniel Scheinert became the first time since the 7th ceremony in 1935, all five Best Actor nominees were first-time nominees were first-time nominees. [13] Michelle Yeoh became the first Asian winner for Best Actor nominees were first-time nominees.
[16] The 42-year span between Judd Hirsch's first nomination, for his supporting role in Ordinary People (1980), and his second, for The Fabelmans, set the record for the longest gap between Oscar nominated competitively in Oscars history.[13] Best
Costume Design winner Ruth E. Carter became the first Black woman to win two Oscars.[17] Daniel Scheinert and Daniel Kwan, Best Actor winners winner Ke Huy Quan, Best Supporting Actor winner Jamie Lee Curtis, Best
M. M. Keeravani, Best Original Song co-winner Joe Letteri, Best Cinematography winner Ruth E. Carter, Best Costume Design winner Paul Rogers, Best Visual Effects co-winner Winners are listed first, highlighted in boldface, and indicated with a double dagger (‡).[18]

Everything Everywhere All at Once[24] Kaala Bhairava Rahul Sipligunj Performer "Naatu Naatu" from RRR Lady Gaga Performer "Lift Me Up" from Black Panther: Wakanda Forever Lenny Kravitz Performer "Calling All Angels" during the annual "In Memoriam" tribute Jimmy Kimmel
hosted the 95th Academy Awards. In September 2022, the Academy hired television producers Glenn Weiss and Kirshner. [26] Two months later,
comedian and talk show host Jimmy Kimmel was announced as host of the gala. "Being invited to host the Oscars for a third time is either a great honor or a trap," Kimmel stated in a press release regarding his selection. "Either way, I am grateful to the Academy for asking me so quickly after everyone good said no", he concluded.[27] Furthermore
AMPAS announced that all 23 categories would be presented live during the gala. The announcement came in response to an internal survey which indicated negative feedback regarding the previous year's gala. [28] In light of the Chris Rock-Will Smith slapping to the control of last year's gala.
incident during the previous year's telecast, AMPAS announced that the organization hired a "crisis team" in the event a similar altercation or if an unexpected fiasco arose. [29] In an interview published by Time magazine, Kramer explained: "We have a whole crisis team, something we've never had before, and many plans in place. We've run many
scenarios. So it is our hope that we will be prepared for anything that we may not anticipate right now but that we're planning for just in case it does happen."[30] The Dolby Theatre stage on the day of the ceremony Several others participated in the production of the ceremony and related events. Rickey Minor served as musical director for the
ceremony.[31] Production designers Misty Buckley and Alana Billingsley, who were the first women-led design team for an Oscars telecast, designed to resemble Art Deco movie places from the Golden Age of Hollywood.[33] Additionally, the set utilized several
LED panels that were used to display the category names, winners' names, or images from the nominated films. [34] Notably, the arrivals area along Hollywood Boulevard outside the Dolby Theatre was lined with a champagne-colored carpet was utilized for the gala.
 According to red carpet consultant Lisa Love, the production team chose a lighter shade of carpet color in order to not clash with a sienna-colored tent trected to shield attendees from the sun or potential rain. She also added that the shades of color for both the carpet and tent were inspired by "watching the sunset on a white-sand beach at the
 'golden hour' with a glass of champagne in hand, evoking calm and peacefulness".[35] Lady Gaga was initially not scheduled to perform her nominated song "Hold My Hand" from Top Gun: Maverick due to prior commitments involving her role in Joker: Folie à Deux. On the morning of the ceremony, however, it was reported that Gaga would perform
at the ceremony.[36] Meanwhile, actress Glenn Close, who was originally scheduled as a presenter during the gala, canceled her appearance due to a positive COVID-19 test.[37] When the nominations were announced, nine of the ten films nominated for Best Picture had earned a combined gross of $1.57 billion at the American and Canadian box
offices at the time. Top Gun: Mayerick was the highest-grossing film among the Best Picture nominees with $718.7 million; this was followed by Elvis ($151 million), Everything Everywhere All at Once ($70 million), The Fabelmans ($15 million), The
Banshees of Inisherin ($9 million), Triangle of Sadness ($4.2 mill
Maverick's Best Picture nominations, it marked the first time since the 55th ceremony in 1983 that the two highest grossing films of the year were both nominated in the aforementioned category.[40] Andrea Riseborough's Best Actress nomination for To Leslie was controversial amongst critics and pundits, as Momentum Pictures, the film's
distributor, did not fund a conventional advertising-driven awards campaign for the film. Instead, director Michael Morris and his wife, actress Mary McCormack, organized a "celeb-backed campaign" to get Riseborough nominated [41][42] They contacted friends and colleagues in the entertainment industry, asking them to view the film and share it
with others if they enjoyed it.[43] Morris and Riseborough's profile; dozens of celebrities praised her performance on social media, and some hosted screenings of the film during voting for the Academy Award
nominations in January 2023.[44][45] Riseborough's nomination was announced on January 24, which the Los Angeles Times called "one of the most shocking nominations in Oscar history".[43] After her nomination was announced, speculation arose that the tactics might have violated AMPAS rules against directly lobbying voters.[46] A post on the
film's Instagram account was noted by several AMPAS members for possibly violating a rule prohibiting "[singling] out 'the competition' by name" by featuring a quote from film critic Richard Roeper, who praised Riseborough's performance as better than Cate Blanchett's in Tár, a fellow nominee for Best Actress.[47] On January 27, the Academy
announced a review of the year's campaigns "to ensure that no guidelines were violated, and to inform us whether changes to the guidelines may be needed in a new era of social media and digital communications for nominees who participated in unsanctioned campaigning. However, there were no reports and to inform us whether changes to the guidelines may be needed in a new era of social media and digital communications for nominees who participated in unsanctioned campaigning.
that Riseborough had been involved in such, or that any Academy members had lodged formal complaints about the campaigning tactics" which they said caused "concern", but confirming that Riseborough's nomination would
be retained.[49] Following the controversy. the Academy introduced new campaigning rules and clarifications in May 2023.[50] Variety columnist Owen Gleiberman wrote: "It didn't overstay its welcome, and it left you feeling that the world's preeminent awards show, all doom-saying punditry to the contrary, is still, on balance, a
very good thing." He also added that the wins received by Everything Everywhere All at Once "lent the evening a rare emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional unity".[51] Television critic Daniel Fienberg of The Hollywood Reporter similarly praised the show's emotional unity of the Show's emotion and the Show's emotion 
[52] Mick LaSalle of the San Francisco Chronicle commended Kimmel's stint as host stating: "He was establishing that 2023 would not be a repeat of 2022 — and it wasn't. It was such a relief to see something, anything, actually get better."[53] Mike Hale of The New York Times remarked on "the ordinariness and sameness of the ABC broadcast"
compared to the prior year, [54] while USA Today's Kelly Lawler criticized it as "terribly fake" and felt that Kimmel's role "felt phoned in, or at least maybe monitored by corporate overlords looking to avoid controversy" despite some of his jokes tackling controversial subjects such as the January 6 United States Capitol attack and Tom Cruise's
Scientology advocacy.[55] Hale added that "the modern Oscars have become something more to be endured than enjoyed".[54] The American telecast on ABC drew in an average of 18.75 million people over its length, which was a 13% increase from the previous year's ceremony and marked the first time that the Academy Awards experienced
consecutive years of viewership increase since the 86th Academy Awards in 2014.[3] The show also earned higher Nielsen rating compared to the previous ceremony with a 4.03 rating among viewers in that demographic.[57] It was the most-
watched prime time entertainment broadcast of 2023 in the United States.[58] In July 2023, the broadcast was nominated for three awards at the 75th Primetime Creative Arts Emmys but failed to win in any of the categories for which it was nominated.[59][60] The annual "In Memoriam" segment was introduced by John Travolta. Singer Lenny Kravitz
performed his song "Calling All Angels" during the tribute. [61] [62] Olivia Newton-John - singer, actress John Korty - director, producer May Routh - costume designer Irene Papas - actress Mitchell Goldman - executive Bob Rafelson - director, writer,
